

Aura Validation Data Center Update

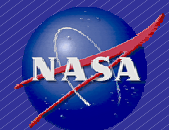

B. R. Bojkov and M. R. Schoeberl
NASA Goddard Space Flight Center

Aura Validation Data Center
Aura ST, September 2006
<http://avdc.gsfc.nasa.gov/>

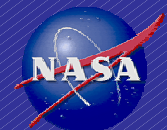

AVDC Overview

- ✓ Central archive for Aura validation datasets
 - <http://avdc.gsfc.nasa.gov>
- ✓ Supports the validation (and investigation) of Aura
 - Aura instrument teams
 - Investigators and contributors
 - Field missions/campaigns
- ✓ Provides data subsetting and mission planning capabilities

Status

- ✓ Operational since February 2005
- ✓ Two major disruptions:
 - March 30-April 6, 2006 RAID failure with partial data loss
 - July 28-August 6, 2006 Web defacement incident
- ✓ Currently with 260 registered users
 - Global participation and interest
 - Up from 175 last November
- ✓ 120,000+ access to **restricted** web/data pages
- ✓ Total none Aura data: 140+GB correlative data

Available Tools

✓ Web portal

- Data news, documentation, meeting proceedings, etc.
- Fully searchable archive
 - HDF validation data
 - Aura measurement coincidences with ground sites

✓ Aura instrument FOVs

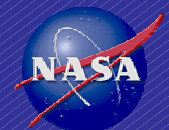

- Predictions and actual instrument FOVs

✓ Download automatization tools

- Scripts and Java GUI available

✓ HDF data conversion tools (read/write)

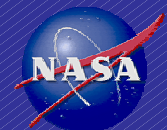

- HDF 5 support in final testing, to be released in October
- Provided custom tools - for example SHADOZ format to HDF

Data Highlights

✓ Aura datasets

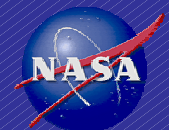

- Exclusive access point to provisional datasets
 - HIRDLS v2.x
 - MLS v2.1
 - OMI products
- Currently subsetting all 4 instruments
- AVDC stores all L2 data (through DAAC subscriptions)
- To host limited OMI L1 (October)

Data Highlights (2)

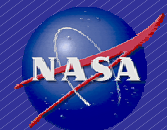

✓ Validation data

- NASA field campaign data
 - Daily mirror of INTEx and AVE archives
 - Archive for the SAUNA and WAVES campaigns
- Non-Aura satellite data
 - Recently added AIRS CO, temperature and ozone
- Groundbased data:
 - NDACC (LIDAR and MWR), ESRL (sondes), MSC...
 - Limited NRA data
- Miscellaneous
 - Recently added MOZAIC aircraft datasets for the early Aura period
 - IONS 2006 (Spring and Summer) sonde data

Collaboration

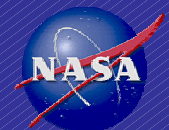

- ✓ **Coordination with campaigns/networks/PIs**
 - Provide of OVP schedules and data subsets
 - CR-AVE, AMMA, SCOUT-O3, SAUNA, WAVES, ...
 - Stations: for example NDACC and SHADOZ stations
- ✓ **Continue close coordination with the NDACC**
 - Access to preliminary data in NRT (mainly LIDAR, MWR)
 - Collaborative effort in data homogenization
- ✓ **ESA - GMES (future missions)**
 - GECA (Generic Environment for Cal/Val Analysis) will be fully synchronized with AVDC and NDACC (kick-off later this month)
 - Retroactive homogenization of existing ESA archives (started)

In Closing...

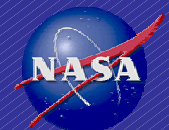

- ✓ Most data requests this Summer came within two weeks of the Science Team
 - All but one request was fulfilled
 - Many required accessing/providing “new” datasets

This is a prevailing issue...

Information Flow

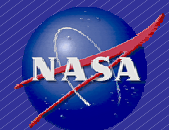

- ✓ AVDC needs (timely) information such as ...
 - Latest Aura data availability including release dates and supporting documentation
 - Validation datasets
 - Satellite, mini-campaigns, etc.
 - Are they available? Are they updated? Contact information?
 - What is needed or could be of use?
 - ... for example is there and in CALIPSO?

<http://avdc.gsfc.nasa.gov>

AVDC is available to all involved in Aura
